| Parth-Fintech Smart Move Indicator

ABOUT

Parth Fintech

Parth Fintech is a Nairobi-based trading technology business registered in 2023, **Focused on automated trading systems, Trading View-based analytical tools, and structured trader support.**

The ParthFX ecosystem is built to help traders access:

- ✓ Rules-based execution
- ✓ Embedded risk controls
- ✓ Market-structure tools
- ✓ Disciplined trade management across multiple market conditions

Core Focus

Automated fore, metals, and indices trading tools with risk-first design.

Platforms

Meta Trader 5 for bots and Trading View for visual indicators and alerts.

Target Users

Retail traders, busy professionals, copy-trading clients, and managed-account structures.

ParthFX Automated
Tools are:

**Suitable for traders
seeking hedging,
breakout trading,
hedged-grid execution,
and live chart-based
signal support.**

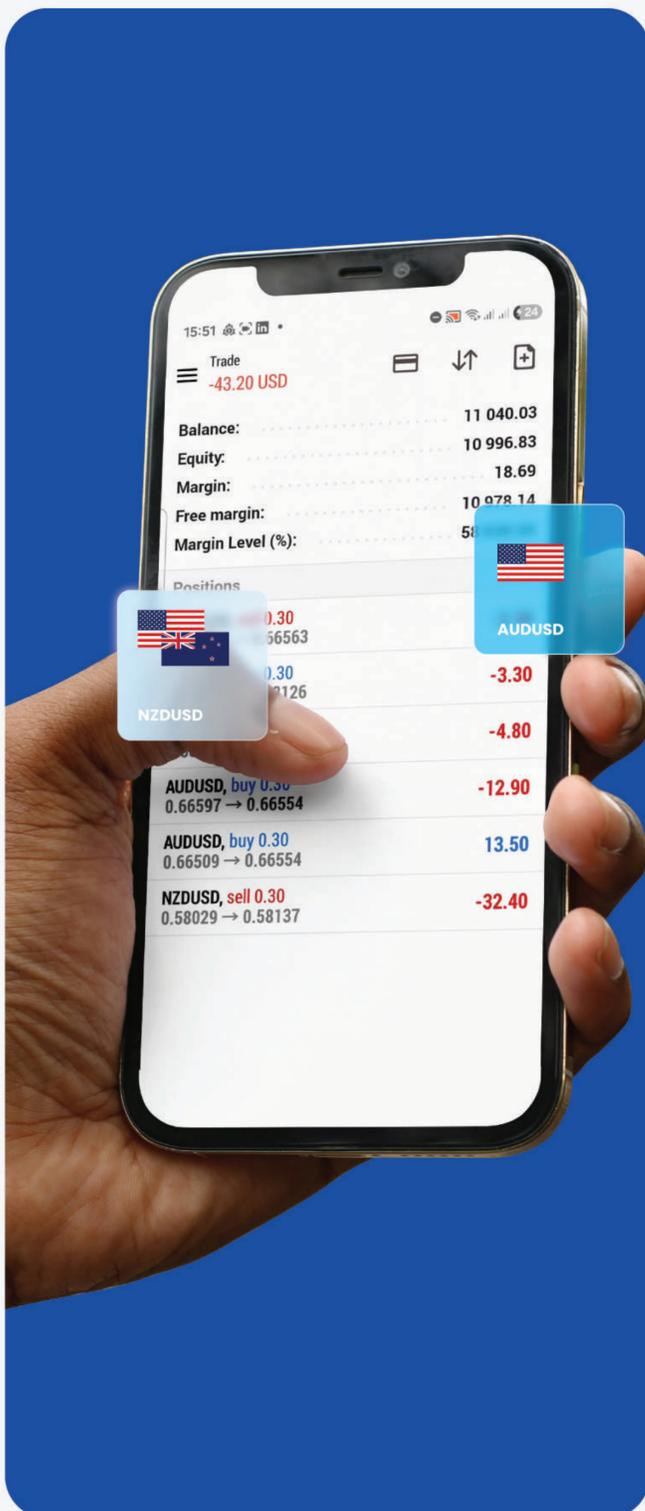

ParthFX ACH Bot

*Hedged correlation engine
for structured non-directional
trading*

Instead of relying on pure directional prediction, it is designed to exploit price inefficiencies, hedge exposure, and capture floating profit opportunities through disciplined batch management.

Available through partner-broker copy trading / managed onboarding.

Client accounts are linked to the Parth Fintech access structure and bot performance fees are handled through the agreed profit-share arrangement.

Key Features

- ✓ ACH paired-trade architecture with independent batch management.
- ✓ Configurable symbols and separate lot sizing per symbol and per batch.
- ✓ Per-batch take-profit, emergency TP, emergency SL, and account-wide emergency controls.
- ✓ Martingale / recovery layering with thresholds, capped levels, and condition gates.
- ✓ Dual-timeframe correlation engine with soft and strict thresholds.
- ✓ Half-life, spread, slippage, and volatility gating for safer trade permission.
- ✓ Dynamic trade comments, transparency alerts, and broker suffix auto-detection.

Best For:

- ✓ Traders seeking hedged, non-directional strategy exposure.
- ✓ Clients who prefer system-led execution over manual chart watching.
- ✓ Users who want multi-layer risk controls within a paired-market framework.

Why It Matters

Reduces dependency on being right about a single market direction.

Uses structured emergency controls to protect capital at both batch and account level.

Creates a disciplined workflow for paired-market opportunities and recovery logic.

ParthFX ORB Bot

Session-based breakout automation for high-quality market windows

ParthFX ORB Bot is a fully automated Opening Range Breakout engine designed to track a defined session range, lock the range once the window closes, and only trade when breakout conditions meet the configured rules.

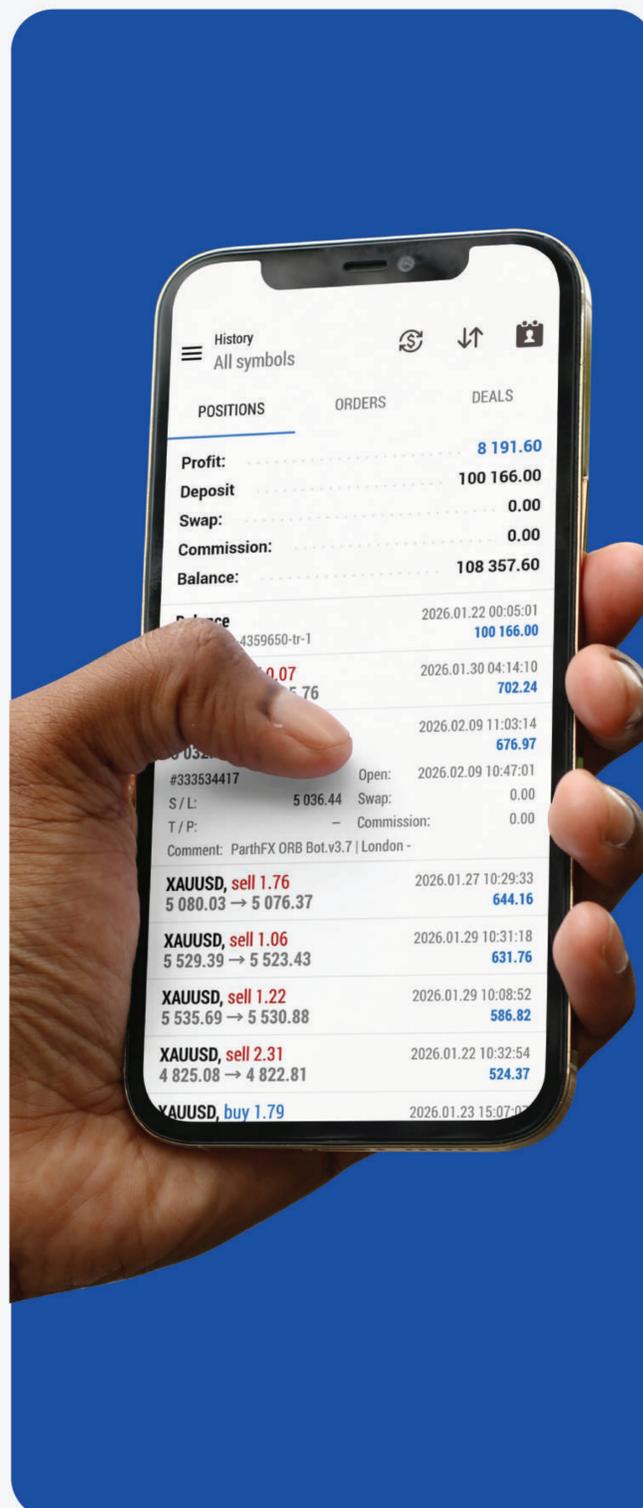

It is built to focus on clean momentum expansion rather than constant market participation.

Available through partner-broker copy trading / managed onboarding.

The bot is not marketed here as a stand-alone sale; rather, clients are onboarded to the managed/copy access structure and the service charge applies on profits earned.

Key Features

- ✓ Configurable session selector and ORB window length for London, New York, or custom sessions.
- ✓ Locked ORB range logic after the opening window closes.
- ✓ Entry modes including close-confirmed breakout and breakout-plus-retest.
- ✓ Range-based stop-loss with adjustable buffer and fixed or RR-based take profit logic.
- ✓ Optional break-even, trailing stop, and trade limits per session/day.
- ✓ ATR volatility gate, ORB range quality filter, and dynamic risk adjustment.
- ✓ MT5 economic calendar news filter with selective event blocking and fail-open/fail-closed modes.
- ✓ Institution-grade event alerts for sessions, entries, management events, exits, and protection blocks.

Ideal For:

- ✓ Traders who prefer fewer, higher-quality trades during major sessions.
- ✓ Busy users who want automated breakout execution with rules-based filtering.
- ✓ Copy-trading or PAMM-style users who want strong timing and risk control.

Why It Matters

Targets cleaner momentum expansions after defined opening windows.

Filters out low-quality environments such as poor volatility, poor range quality, and high-impact news windows.

Automates the full lifecycle from breakout detection to exit and alert reporting.

ParthFX GRD Bot

Hedged-grid execution with dynamic risk throttling and session-aware protection

ParthFX GRD Bot is a proprietary automated hedged-grid system for Forex, Gold, and indices on MT5.

It uses round-number grid triggers, dual-basket logic, dynamic throttle modes, and multiple protection layers to help structure basket trading with transparency and controlled escalation.

Available through Parth Fintech onboarding for copy trading / managed access.

The bot is geared toward users who want systematic basket execution supported by structured controls rather than discretionary grid trading.

Key Features

- ✓ Hedged grid engine with structured BUY/SELL baskets around round-number triggers.
- ✓ Dynamic Risk Throttle with Aggressive, Moderate, and Conservative modes, plus optional lock-until-flat behavior.
- ✓ Session-aware lot sizing with separate controls for Asia, London, and New York.
- ✓ Spread, slippage, margin-level, volatility, RSI, and news-based entry blockers.
- ✓ Edge-only anti-cluster logic to prevent stacking entries inside existing ranges.
- ✓ Money-equivalent basket take-profit gate, emergency stop, cooldown, and close optimizer.
- ✓ Dashboard transparency and event-coded alerts for important blocks, opens, and closes.

Ideal For:

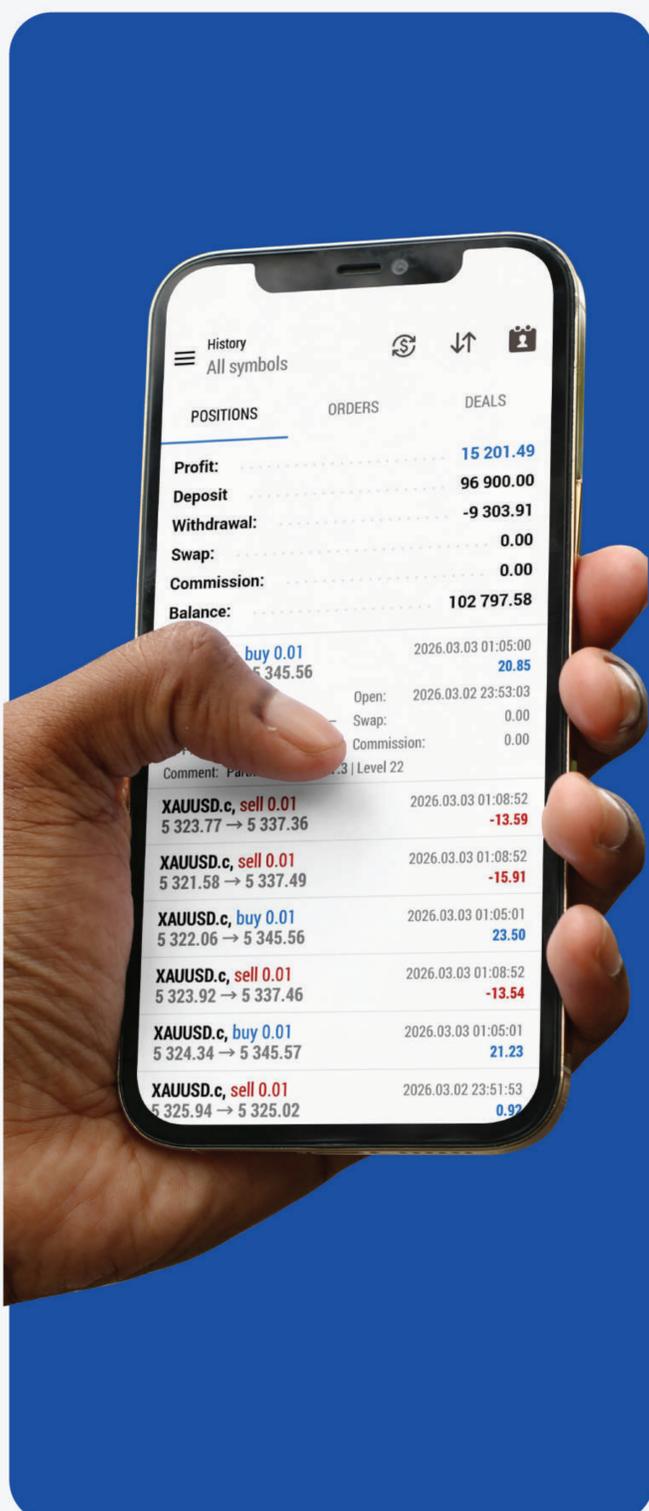

- ✓ Traders seeking hedged, non-directional strategy exposure.
- ✓ Clients who prefer system-led execution over manual chart watching.
- ✓ Users who want multi-layer risk controls within a paired-market framework.

Why It Matters

Reduces dependency on being right about a single market direction.

Uses structured emergency controls to protect capital at both batch and account level.

Creates a disciplined workflow for paired-market opportunities and recovery logic.

Smart Move Indicator

TradingView-based trading tool for structured entries, zones, and live alerts

The ParthFintech SMART-MOVE Indicator is presented in this brochure as a practical chart-based tool for traders who want faster market reading, clearer entry and exit planning, and live alert support.

It fits the broader Parth Fintech smart-indicator approach of combining actionable signals with

Key Features

- ✓ Color-coded trade direction cues for faster decision support.
- ✓ Usable with candlestick or Heikin Ashi chart views.
- ✓ Live alerts through TradingView, email, or webhook workflows.
- ✓ Clearly plotted market zones such as support, resistance, FVGs, order blocks, and liquidity sweeps.
- ✓ Suitable for active chart analysis across 15-minute, 1-hour, and 4-hour workflows.

Access Model

1. Open an account with Parth Fintech's partner broker, use the designated QR code/signup path
2. Fund the account with at least \$1,000. Once funded and confirmed, onboarding guidance can be provided for activation.

Minimum funding requirement for indicator access: \$1,000

Broker signup path and QR code to be inserted by Parth Fintech trading.

Commercial Terms & Access Structure

The terms below reflect the access and onboarding structure requested for this brochure.

OFFERING	COMMERCIAL MODEL	CLIENT REQUIREMENT
ParthFX ACH ORB & GRD Bot	45% service charge on all profits earned as profit share for the bots. The balance remains in the client account subject to the broker/copy structure.	Client completes partner-broker registration, verification, funding, and copy trading / managed linkage.
ParthFintech SMART-MOVE Indicator	No profit-share term is stated here; access is tied to the broker-account onboarding requirement described by Parth Fintech.	Client opens partner-broker account through the designated QR code path and funds at least \$1,000 before activation.
